Art Unit: 2824

Applicant's election of Species E/ of Figs. 11-13, corresponding to claim 6, in Paper No. 9, is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-5 and 7-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 9.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested:

--Embedded semiconductor memory with crossbar wirings and switches for high bandwidth--.

The drawings are objected to because:

Figs. 16, 17 and 18 should be labeled as --PRIOR ART--, as disclosed in the specification. In Fig. 18, "Switcher" should be changed to --Bus Switch--.

Art Unit: 2824

The last page of drawings (ie. page 19/19 - "Reference Numerals in the Drawings") should be given a figure number, such as --FIG. 19--; and corresponding description thereof in the specification. Also on this page 19/19, "Switchers" should be changed to --Switches--, and "Memry Cell" should be changed to --Memory Cell--.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise, exact, or with typographical errors. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: "memories are interconnected" (pg. 2, ln. 25), or "for arbitrating the same memory" (pg. 3, ln. 13-14).

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The

Art Unit: 2824

substitute specification filed must be accompanied by a statement that it contains no new matter.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 is incomplete as failing to recite the interconnections between claimed elements, ie. "one or a plurality of processor elements" (clm. 6, ln. 2) not interconnected with other claimed elements. It is suggested to use terms such as --connected to-- to define said interconnections.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 2824

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 6 is rejected under 35 U.S.C. 102(a) as being anticipated by Ohtani et al. (EP 0 935 252 hereafter referred to as Ohtani). See for example Fig. 4.

Ohtani discloses an embedded DRAM (col. 1, ln. 5-14) comprising a plurality of first data line pairs (local IO line pairs LIO) each connected to one of the bit line pairs (bit line pairs BL) by the first gate pairs (column select gate pairs TG); and a plurality of second data line pairs (global IO line pairs GIO) connected to one of the first data line pairs by the second gate pairs (block select gate pairs BSG).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Miyano et al. (US 5,590,084) describes a semiconductor memory device having a column selector.

Harima (US 5,715,202) describes a semiconductor memory device.
